Florenz Jay B. Francisco

1497, Bagong Sibol Street, Mambangnan, Nueva Ecija • San Leonardo, 3102
• Florenzjayfrancisco0330@gmail.com • 09060840555

Profile

Dedicated and motivated Computer Engineering student with a solid foundation in programming, electronics, and system design. Skilled in developing software and embedded solutions using Python, Java, C++, and Arduino, with hands-on experience in AI integration, database management, and automation projects. Committed to continuous growth and lifelong learning, with a strong passion for innovation, robotics, and technology-driven problem-solving.

Education

José Rizal University *Shaw Boulevard, Mandaluyong City, Philippines*
Bachelor of Science in Computer Engineering 2022 - Present

Juan R. Liwag Memorial High School *Bayanihan, Gapan City, Philippines*
Science, Technology, Engineering and Mathematics (STEM) Graduate 2020 - 2022

Juan R. Liwag Memorial High School *Bayanihan, Gapan City, Philippines*
High School Diploma 2016 - 2020

Experience

AWS Academy Graduate – Cloud Foundations November 2025
Trainee / Student

- Completed foundational cloud training covering AWS core services, cloud concepts, and global cloud infrastructure.
- Gained hands-on experience using the AWS Management Console through guided labs focused on security, IAM, and basic cloud architecture.

Safety Awareness 101: Unlocking Greatness Together October 2025
Event Organizer

- Organized and hosted a school webinar promoting Occupational Safety and Health (OSH) awareness for CpE Students.
- Collaborated with ATSOCA Learning Hub and Guest Speaker to ensure smooth event logistic and program flow.
- Designed promotional materials and facilitated participant engagement through interactive activities and raffles.
- Distributed e-certificates to attendees to recognize participation and commitment to workplace safety.

Leadership & Activities

Student Pioneers for Advancement, Revolution, and Knowledge (SPARK League) *Mandaluyong City*
Lead Innovation Committee October 2025 – Present

- Created and published media captions for upcoming and completed organizational events across social platforms.
- Contributed to the design and execution of innovative event plans that increased student interaction and attendance.

Academic Projects

Waste Segregation and Composting System May 2025

- Built an AI-powered waste segregation system using ESP32-CAM and Convolutional Neural Network (CNN) for image-based classification.
- Automated sorting of recyclable materials (plastic, metal, paper and organic) using servo motors for bin separation.
- Utilized machine learning to recognize waste types without traditional sensors, enhancing cost efficiency.
- Aimed to promote environmental sustainability through smart recycling and composting innovation.

Lost and Found System May 2024

- Developed a web based lost and found platform using Python, HTML, and CSS to assist in reporting and recovering lost items.
- Designed structured data forms and automated listings to simplify item search and reporting.
- Digitized the lost-and-found process, improving accessibility and accountability within the school community.
- Showcased problem-solving and database management skills through backend integration.

Ticketing System May 2024

- Designed and implemented an online concert ticketing platform using HTML, CSS, JavaScript, PHP, and MySQL.
- Created separate user and admin dashboards for secure registration, order tracking, and ticket management.
- Integrated cart functionality, payment simulation, and event management modules to enhance usability.
- Optimized event coordination and data integrity through real time updates and organized database operations.

Applicant Deployment System December 2023

- Developed a applicant deployment system to automate applicant registration, screening, and deployment processes.
- Implemented centralized data management to eliminate redundancy and improve record accessibility.
- Enhanced process efficiency by enabling administrators to manage applicants from initial screening to deployment.
- Demonstrated technical proficiency in GUI design, logic structuring, and data handling.

Skills & Interest

Technical Skills: Python, Java, C++, HTML, CSS, Arduino, Android Studio, Circuit and Logic Design, System Troubleshooting, Database Management (MySQL, Oracle, Firebase, SQL Server)

Soft Skills: Leadership, Effective Communication, Analytical Problem-Solving, Adaptability in Dynamic Environments, Collaborative Teamwork, and Creative Innovation.

Interest: Passionate about robotics development, circuit and system design, graphical user interface (GUI) design, and hands-on experimentation with electronic devices, automation projects, and basic multimedia editing (video and image).

Certification: CompTIA ITF+, AWS Academy Graduate – Cloud Foundations, AWS Certified Cloud Practitioner
